## HYBRID GOLID STATE RELAY

## Proton Rad Hard 100K + Technology

## Features:

- High Voltage/Low Resistance
- Single Pole, Single Throw Available in Form A or Form B
- Wide Band Gap Semiconductors for low Resistance
- No SEE LET>82Mev* ${ }^{*} \mathrm{~cm}^{2} / \mathrm{mg}$
- $100 \mathrm{~K}+$ Rad Hard TID 100kRads (S and SE Grades)
- TID 45 krads (L and LE Grades)
- Magnetically Coupled Command for fast response
- No Optocoupler, no optocoupler issues
- Selectable Continuous or Mag Latch Function
- Logic Level Drive
- Rugged "Mini" Hermetic Package

## Specifications:

Bias Input Voltage 4.7 to 5.3 VDC
Bias current 25 mA typical, 45 mA maximum
Operate pin current 5 mA maximum
Input/output and all pins to case isolation 1 kV
Power Dissipation 2 watts at maximum rated case temperature

Case temperature range:
Operating $-55^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ (L, S grade)
Operating $-55^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$ (LE, SE grade)
Storage $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$
Weight: 18 grams typical
To energize the SSR, connect 5VDC bias from pin 1 to bias ground pin 2.
Ground pin 3 to energize the SSR.

## Power Dissipation:

Total steady state power dissipation of the model 53815 and 53814 is limited to 2 watts provided the baseplate temperature is limited to the rated temperature.

Modular Devices, Inc.
Power Conversion for Space and Military/Aerospace

Model 53815 is a SPST form B (normally closed when de-energized) SSR.
Model 53814 is a SPST form A (normally open when de-energized) SSR.
Both types use Wide Bandgap power semiconductors for high performance, are magnetically coupled and can be user configured for continuous or pulse latching.

Wide band gap (WBG) semiconductors, such as GaN (Gallium Nitride) and SiC (Silicon Carbide) provide an order of magnitude improvement in SSR voltage drop compared to SSRs using Silicon based power devices.
Also, WBG semiconductors of a given dimension can withstand higher electric fields than Silicon semiconductors, the physical dimensions of these WBG parts are considerably smaller than their Silicon competitors. The result of WBG is much lower channel resistances and reduced drive requirements.

Many SSR manufacturers drive their SSR power device with opto couplers consisting of an LED emitter driving a multi-diode photo-voltaic stack.

Both the LED's and photovoltaic stacks are challenged by a radiation environment. A second disadvantage of opto coupled drive is slow turn on and off response.
MDI replaces the optocoupler function with a tiny, transformer isolated RF drive signal. This solves the opto coupler problems and gives faster, more temperature stable operation, as well as excellent radiation resistance.
